ICOM DIGITAL ADVANCED SYSTEM

*IP virtual
 radio*

Transitioning from one system to another can be a challenge. IDAS was designed to make the migration to digital as seamless as possible. Discover the advantages of digital.

Migrate into Digital Two-Way Radio with IDAS™.

IDAS is the best choice of professional digital two-way radios available today. It's a communications platform that will grow with your company into the future. Greater audio quality, enhanced security, integrated data are all inherent in IDAS, which is available in conventional mode for systems or with IDAS trunking where radio users find it hard to gain access to busy channels. IDAS trunking makes the most of the radio spectrum you have.

IDAS surpasses today's FCC mandate to go narrow band, aligning it with the FCC's near-future 6.25kHz vision. IDAS is based on a non-proprietary protocol developed by multiple companies. You're not locked in to a single vendor as your system changes and grows. When you buy IDAS, you are making a lasting transition to the digital future easily and effectively.
